No Report.

7.2 Plant Control/Health Dept. Report: **Tom Keefe**
The Health Department has been out twice to check the T&E species. There have been no changes, which does not effect the T&E study. Did total fish population and did not see any noticeable changes. Gerry did a rake survey on the weeds and what was assumed to be milfoil, was actually coon tail, which is a native plant that appears to be coming back. Glenna from Lagoona reported that elodea is now taking over where the milfoil has died off.

After the positive results of treating milfoil with ProcellaCor in our lakes, the Forest Preserve is targeting milfoil in some of their lakes.

7.2.1 Harvesting Report:

Harvester is in the water, the buoys are out, and the crew was ready to start. A tire blew on the trailer and was replaced. Daisy is currently training on the machine. The native plants in West Loon are growing very rapidly, but not so much on East Loon.

Will monitor harvesting in each lake to determine the best course of action. If the channel becomes impassable, the harvester will cut a little longer in each lake as it is time consuming transferring the harvester from lake to lake. Tom is going out with the crew to assess the troubled areas.

7.3 Finance Committee: **Chuck Simpson**
No report.

7.4 Water Clarity/Lake Monitoring Report: **Roger Doss**
The water level is currently 1.65. No appreciative rain for 2 weeks. Dave and Roger went out last week with the Cecci disks examining the water clarity.
